This takes place at the southern end of the site near the old car park and is intended as a grassed and shaded area for residents to use. Flat green space is also available to the north of the site and towards Albert Square. Westminster City Council's Design and Sustainability Office said this is the first time an urban park has been included in the centre of a major capital's design. The city-wide consultation process included a series of workshops and open spaces, and won backing from residents and local community groups. Wimbledon Borough Council planning officer Jamie Morrell said: "The new design is a great opportunity to enhance the quality of life in the area. "It's created a safe, open space for residents, is welcoming and has a real sense of the past, so there are some lovely and evocative features to discover." Trevor Norris from the Friends of West Green said: "This is really exciting and will be a great asset to the area." The new proposal is scheduled to appear at a meeting of the full planning committee on Wednesday. Wimbledon planning enforcement officer Sarah Woodhouse said: "This is an exciting opportunity for the whole borough to see the first such urban park created in the heart of the capital. "The final design has been shaped by the residents and local community groups, so we are very keen to see what they think." Other urban parks in the capital include Battersea Park and Hounslow New Town.21. THE CHANNEL OF THE SILENT MIND: A NEW THEORY OF THE MENTAL SELF by William James. I have a DataTable called dtTest and I want to find the "UserID" column. I want to remove the row that has the same "UserID" as the row that I'm searching for. I'm wondering if there is a way of finding that specific column and just removing that row. A: I guess you could do that, looping through the Rows and comparing the data: foreach(DataRow row in dtTest.Rows) { if(row["UserID"].ToString() == "UserIDYouWantToRemove") dtTest.Rows.Remove(row); } Q: dojo/xid function: insertText Hello I've been trying for a long time to do this but without success: I need to insert text into a dijit, so I tried the following: dwr.addDojo( { tag: "button", cls: "f1", onClick: function() { this.dijit.byId("home").insertText("1"); } }); The dijit object is visible in the html, so I believe it's accessible, but it's not visible. any help please? thanks A: My guess is the container is not visible. The user-interface is populated with a node list. This means the container will not show up if you scroll down. See the dojo widget tree You can try to 2d92ce491b
